## **CSC 411**

**Computer Organization (Spring 2023) Lecture 8: Integer Representation** 

Prof. Marco Alvarez, University of Rhode Island

## int main() { char a = 254;unsigned char b = 254; unsigned int c = 0; printf("%d %d\n", a, b); if (-1 < c) { printf("yay\n"); } else { printf("!!!???\n");

#include <stdio.h>

### **Disclaimer**

The following slides are from:

Computer Systems (Bryant and O'Hallaron)

A Programmer's Perspective

### **Encoding Integers**

Unsigned

 $B2U(X) = \sum_{i=0}^{w-1} x_i \cdot 2^i$ 

**Two's Complement** 

short int x = 15213; short int y = -15213;

■ C does not mandate using two's complement

But, most machines do, and we will assume so

C short 2 bytes long

_		,				
		Decimal	Hex	ex Binary		
	x	15213	3B 6D	00111011	01101101	
	У	-15213	C4 93	11000100	10010011	

- Sign Bit
  - For 2's complement, most significant bit indicates sign 0 for nonnegative
    - 1 for negative

Bryant and O'Hallaron, Computer Systems: A Programmer's Perspective, Third Edition

Sign Bit

#### Carnegie Mellon

## **Two-complement: Simple Example**

$$-16$$
 8 4 2 1  $10 = 0$  1 0 1 0  $8+2 = 10$ 

$$-16$$
 8 4 2 1  $-10$  = 1 0 1 1 0  $-16+4+2 = -10$ 

Bryant and O'Hallaron, Computer Systems: A Programmer's Perspective, Third Edition

## Two-complement Encoding Example (Cont.) x = 15213: 00111011 01101101

x = 15213: 00111011 01101101 y = -15213: 11000100 10010011

### **Numeric Ranges**

#### Unsigned Values

- *UMin* = 0 000...0
- $UMax = 2^w 1$ 111...1

#### ■ Two's Complement Values

- $TMin = -2^{w-1}$ 100...0
- $TMax = 2^{w-1} 1$ 011...1
- Minus 1111...1

#### Values for W = 16

	Decimal	Hex	Binary		
UMax	65535	FF FF	11111111 11111111		
TMax	32767	7F FF	01111111 11111111		
TMin	-32768	80 00	10000000 00000000		
-1	-1	FF FF	11111111 11111111		
0	0	00 00	00000000 00000000		

yant and O'Hallaron, Computer Systems: A Programmer's Perspective, Third Edition

### Values for Different Word Sizes

	W				
	8	16	32	64	
UMax	255	65,535	4,294,967,295	18,446,744,073,709,551,615	
TMax	127	32,767	2,147,483,647	9,223,372,036,854,775,807	
TMin	-128	-32,768	-2,147,483,648	-9,223,372,036,854,775,808	

#### Observations

- |*TMin* | = *TMax* + 1
  - Asymmetric range
- UMax = 2 \* TMax + 1
- Question: abs(TMin)?

#### C Programming

- #include limits.h>
- Declares constants, e.g.,
  - ULONG\_MAX
  - LONG\_MAX
  - LONG\_MIN
- Values platform specific

ant and O'Hallaron, Computer Systems: A Programmer's Perspective, Third Edition

Carnegie Mellon

## **Unsigned & Signed Numeric Values**

Х	B2U( <i>X</i> )	B2T(X)
0000	0	0
0001	1	1
0010	2	2
0011	3	3
0100	4	4
0101	5	5
0110	6	6
0111	7	7
1000	8	-8
1001	9	-7
1010	10	-6
1011	11	-5
1100	12	-4
1101	13	-3
1110	14	-2
1111	15	-1

#### Equivalence

 Same encodings for nonnegative values

Carnegie Mellon

Carnegie Mellon

#### Uniqueness

- Every bit pattern represents unique integer value
- Each representable integer has unique bit encoding

#### ■ ⇒ Can Invert Mappings

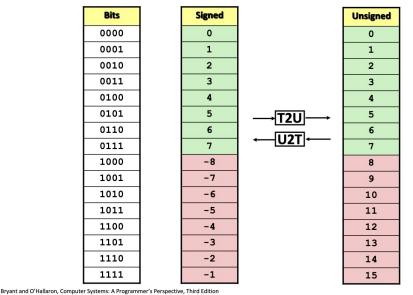

- $U2B(x) = B2U^{-1}(x)$ 
  - Bit pattern for unsigned integer
- T2B(x) = B2T<sup>-1</sup>(x)
  - Bit pattern for two's comp integer

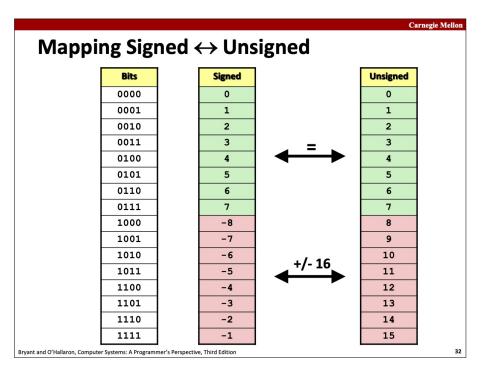

Bryant and O'Hallaron, Computer Systems: A Programmer's Perspective, Third Edition

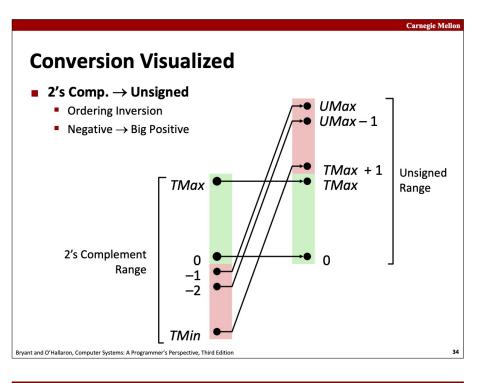

Carnegie Mellor **Mapping Between Signed & Unsigned** Unsigned Two's Complement T2U  $T2B \xrightarrow{X} B2U$ их Maintain Same Bit Pattern **Two's Complement** Unsigned U2T  $U2B \xrightarrow{V} B2T$ uxMaintain Same Bit Pattern Mappings between unsigned and two's complement numbers: **Keep bit representations and reinterpret** Bryant and O'Hallaron, Computer Systems: A Programmer's Perspective, Third Edition

## Mapping Signed ↔ Unsigned

Bits	
0000	
0001	
0010	
0011	
0100	
0101	
0110	
0111	
1000	
1001	
1010	
1011	
1100	
1101	
1110	
1111	

Signed vs. Unsigned in C Constants By default are considered to be signed integers Unsigned if have "U" as suffix OU, 4294967259U Casting Explicit casting between signed & unsigned same as U2T and T2U int tx, ty; unsigned ux, uy; tx = (int) ux;uy = (unsigned) ty; Implicit casting also occurs via assignments and procedure calls tx = ux;int fun(unsigned u); uy = ty;uy = fun(tx);Bryant and O'Hallaron, Computer Systems: A Programmer's Perspective, Third Edition

Carnegie Mellon

## **Casting Surprises**

- Expression Evaluation
  - If there is a mix of unsigned and signed in single expression, signed values implicitly cast to unsigned
  - Including comparison operations <, >, ==, <=, >=
  - **Examples for W = 32:** TMIN = -2,147,483,648, TMAX = 2,147,483,647

Constant <sub>1</sub>	Constant <sub>2</sub>	Relation	<b>Evaluation</b>				
0	0U	==	unsigned				
-1	0	<	signed				
-1	0U	>	unsigned				
2147483647	-2147483647-1	>	signed				
2147483647U	-2147483647-1	<	unsigned				
-1	-2	>	signed				
(unsigned)-1	-2	>	unsigned				
2147483647	2147483648U	<	unsigned				
2147483647	(int) 2147483648U	>	signed				
ant and O'Hallaron, Computer Systems: A Programmer's Perspective, Third Edition							

Carnegie Mellon

Carnegie Mello

# Summary Casting Signed ↔ Unsigned: Basic Rules

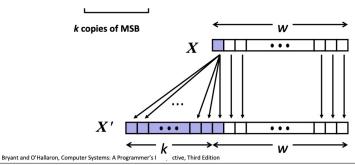

- Bit pattern is maintained
- But reinterpreted
- Can have unexpected effects: adding or subtracting 2<sup>w</sup>
- Expression containing signed and unsigned int
  - int is cast to unsigned!!

ant and O'Hallaron, Computer Systems: A Programmer's Perspective, Third Editio

38

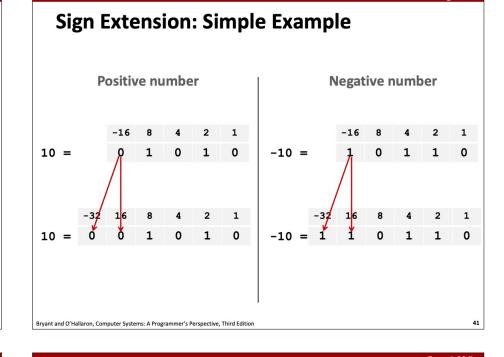

- Task:
  - Given w-bit signed integer x
  - Convert it to w+k-bit integer with same value
- Rule:
  - Make k copies of sign bit:
  - $X' = X_{w-1}, ..., X_{w-1}, X_{w-1}, X_{w-2}, ..., X_0$

Carnegie Mellon

Carnegie Mellon

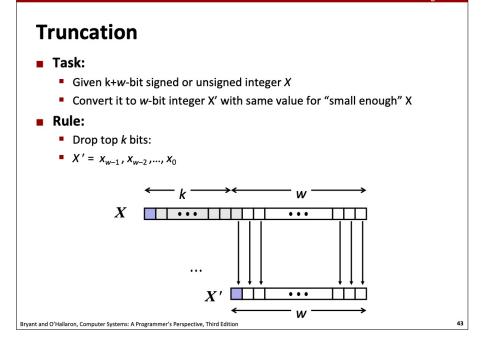

## **Larger Sign Extension Example**

short int x = 15213;
int ix = (int) x;
short int y = -15213;
int iy = (int) y;

	Decimal	Hex	Binary
x	15213	3B 6D	00111011 01101101
ix	15213	00 00 3B 6D	00000000 00000000 00111011 01101101
У	-15213	C4 93	11000100 10010011
iy	-15213	FF FF C4 93	1111111 11111111 11000100 10010011

- Converting from smaller to larger integer data type
- C automatically performs sign extension

Bryant and O'Hallaron, Computer Systems: A Programmer's Perspective, Third Edition

## **Truncation: Simple Example**

No sign change

 $-6 \mod 16 = 26U \mod 16 = 10U = -6$ 

Sign change

$$10 \mod 16 = 10U \mod 16 = 10U = -6$$

Bryant and O'Hallaron, Computer Systems: A Programmer's Perspective, Third Edition
